

Launching the FIATA Connect series

Emission Calculators: A Working Group Sustainable Logistics Topic

A new webinar series called *FIATA Connect* will provide far-reaching insights on cutting-edge practices to assist logistics professionals in better navigating the industry. *FIATA Connect* will be launched in July, with four editions planned over the year, and will feature leading experts in the logistics and supply chain sector.

The first *FIATA Connect* edition, organized under the auspices of the Working Group Sustainable Logistics, will address “**Greenhouse gas emission calculators and standardization processes: Perspectives for the freight forwarding sector**”.

The Global Logistics Emissions Council Framework, an internationally recognized method to calculate and report on greenhouse gas emissions across the multimodal supply chain, is today in the process of becoming an ISO (International Organization for Standardization) standard (ISO 14083).

This is a crucial issue for the future of the freight forwarding community. FIATA is therefore inviting its members to attend a virtual event, where **Andrea Schoen, Head of Business Sustainability and Customer Consulting at DB Schenker**, will speak about this process and what it means for the industry.

Save the date

Date: Thursday, 1 July

Time: 9:30-10:30 CEST

Venue: online

More details on this FIATA Connect serie, such as the registration process (free of charge), will be released closer to the event. Further announcements will be posted on the FIATA website and social networks.
